

Desulfurization and filters are not the best and permanent solution for Serbia

Zvezdan Kalmar, energy coordinator of the Center for Ecology and Sustainable Development (CEKOR), emphasized at a conference entitled "Let's fight air pollution, but let's not forget about climate change!" That there is a deeply dangerous and wrong agreement between activists and experts. with EPS measures, which will result in a huge increase in coal ore exploitation.

- At this moment, we should talk about the reduction of pollution produced by EPS, whose plans are to allocate 100 million euros for the reduction of pollution in the next period, pointed out Zvezdan Kalmar.

According to him, desulphurization and filters are not the best and permanent solution in our country. As an example, he stated that on that occasion, particles are released from the used filters due to the impossibility of their proper storage.
