

Environment South East Europe Watch temporarily suspends the activity

Environmentsee.eu, Environment South East Europe Watch temporarily suspends the activity due to the lack of funding and donations.

For the last several years we managed to bridge the gaps between various stakeholders impacted by environmental risks, while promoting ESG standards in the region of South East Europe covering 12 countries. As the only english and local languages Eco News Watch we managed to raise the attention to importance of ESG standards.

We are hoping to resume the work once the funding is secured from donors.

Yours truly

EnvironmentSee team
