

First of 15 wind turbines installed at wind farm near Mostar in Bosnia and Herzegovina

Bosnia's power company Elektroprivreda said that a consortium of Siemens Games Renewable Energy Croatia and Wind Power Denmark installed the first of 15 wind turbines for a future wind farm near Mostar in southern Bosnia and Herzegovina.

The Bosnian electricity company is investing 69 million euros in the project. When in operation, the expected annual electricity production will be 130 GWh.

Elektroprivreda's chief executive officer for equity investment Senad Salkic said all turbines were expected to be installed by the end of the year.

The construction is financed by a loan from the German development bank KfW.
