

The company Wellbury-Bela Anta Ltd has received the location permit for the wind park project Bela Anta of 120MW in Dolovo, near Pancevo. In accordance with the legislature, this step is an important condition for the further development of technical documentation and getting the building permit for the wind farm itself, says Wellbury-Bela Anta, which carries the project.

In order to secure the connection of the wind farm to the remote electrical energy system of PUE Elektromreza Srbije, Wellbury-Bela Anta will finance, in accordance with the Energy Law, the manufacture of this connection.

The connection consists of a 110kV substation and 110kV power lines from TS Pancevo 2 to PRP Bela Anta.

The company says for eKapija that it has submitted the documentation for public inspection of the preparation of the Detailed Regulation Plan for the 110kV power lines from TS Pancevo 2 to PRP Bela Anta in Dolovo.
